ABOUT ME

The origins of the first constellations date back to prehistoric times.

Andromeda is one of the 48 constellations listed by Ptolemy and one of the 88 modern constellations. It is situated to the north of the celestial equator and derives its name from Andromeda, the daughter of Cassiopeia in Greek mythology, who was chained to a rock to be devoured by the sea monster Cetus. Andromeda is most noticeable during autumn evenings in the northern hemisphere and is also one of the largest constellations, measuring more than 1,400 times the size of the full Moon.

Pisces is a zodiac constellation.
